

PROFILE

With 10+ years of professional experience in many areas of web development, I have a rock solid understanding of HTML and CSS. Along with that, I am not to bad with js/PHP and have worked with React a few times but would say I am still just learning.

I am able to take on projects that are built on WordPress, Laravel, Shopify and many more. If I do not know it, I am willing to learn it. That is part of the fun of being a web developer after all.

EXPERIENCE

Scalable Group - Front End Developer

2018 - 2019

At Scalable Group I would work with designers, back-end developers, marketing and clients to build the projects to spec. Working in Wordpress, Laravel, Shopify, basic HTML/PHP and even a little React.

InfoStream/Reflex Media - Front End Designer

2013 - 201

At Reflex I would manage the front end of the company sites, working with a custom framework, WordPress, Laravel, SASS, Smarty and Blade. I would take mockups and turn them into functional site or components.

Social Road Media - Manager/Web Developer

2013 - 2013

At Social Road Media, I was in charge of building sites from the ground up, planning out the path we would use to launch a site, and working directly with clients to ensure that the site we built for them would function and look just as they specified.

KJR Management - SEO Tech - Design Manager

2009 - 2013

KJR is where I first started to learn about site architecture, SEO, validating code, and building a site that is user friendly. After years of learning, I moved on to be their Design Manager and started working with clients designing sites from the ground up.

This is a site I built to be an informational blog for a large mattress brand. It was built on Wordpress with Jointswp, FOUNDATION 6 and SCSS.

The front end of Open Minded was built on WordPress and uses SASS to manage and compile the css. The members area was built on Kohana and Smarty, and still uses SASS to manage the css

This is an affiliate type of site that allows influencers to share products and make money. This was a fun project to work on and made me like working with Blade just that much more.

The public side of Miss Travel was built using Laravel as the base framework along with Blade for the template engine and SASS to manage the styles.
